

MilkMatch™ 25/10 PLASMA BOV SAF DBZ

Medicated Pasteurized Milk Supplement For Dairy Herd and Beef Calves

For the control of coccidiosis caused by *Eimeria bovis* and *Eimeria zuernii* in replacement calves. Feed during periods of coccidiosis exposure or when experience indicates coccidiosis is likely to be a problem.

ACTIVE DRUG INGREDIENT

Lasalocid (as lasalocid sodium).....455 g/ton
For preventing the development of house, stable, face, and horn flies in the manure of treated calves.

ACTIVE INGREDIENT

Diflubenzuron (CAS #35367-38-5).....45.5 g/ton
WARNING: Withdrawal period has not been established for lasalocid in pre-ruminating calves. Do not use in calves to be processed for veal.

- Do not feed to lactating cows.
- Do not feed to foals, dogs, and cats.

CAUTION: The safety of lasalocid in unapproved species has not been established.

MIXING AND FEEDING DIRECTIONS

This is not a complete feed and MUST be mixed with non-medicated feed prior to giving to the animal.

Based on a 125 lb Calf: Add 0.125 lb of MilkMatch™ 25/10 PLASMA BOV SAF DBZ powder to 2 quarts of pasteurized milk. Feed twice daily.

When mixed as directed above, this product provides 14.2 mg lasalocid and 1.42 mg diflubenzuron per quart. Feed at a rate to provide 45.4 mg per 100 lb body weight daily. With large batches, agitate mix for individual dispensing to minimize settling.

Feed at the above rate to prevent the emergence of adult house flies, stable flies, horn flies, and face flies from manure of treated cattle. Existing adult flies will not be affected. Start feeding 30 days before flies begin to appear and continue feeding until cold weather restricts fly activity. In some cases, supplemental control measures may be needed in and around barns and calf hutches to control adult house and stable flies, which can breed in other decaying organic matter or silage in the area, or that migrate in from other locations.

MANAGEMENT TIPS

- Provide fresh, clean water at all times.
- Thoroughly clean mixing/feeding equipment after each feeding.
- Introduce calf starter by at least 7 days of age.
- Wean calves when eating at least 2 lb calf starter per head per day for 3 consecutive days.
- Introduce good quality hay after weaning.
